CAREER OBJECTIVE

Aspiring Full-Stack Developer pursuing a B.Tech in Computer Science & Engineering at Parul University, with a strong specialization in the MERN stack. Proven ability to independently design, build, and deploy production-grade applications, including NewsCore, an AI-powered news aggregation platform, and Daily Drape, an AI-driven outfit recommendation platform. Proficient in Node.js, Express.js, PostgreSQL/Neon, React, and Tailwind CSS, with practical experience in Git-based CI/CD deployment on Render. Currently developing Swachh Spot, a civic sanitation discovery platform, reflecting a genuine passion for engineering practical, technology-driven solutions to real-world problems.

EDUCATION

B.Tech Computer Science & Engineering <i>Parul University, Vadodara</i>	2024 – 2028
XII (GSEB) — G.N.F.C. Narmada Vidyalaya, Bharuch	2024
X (GSEB) — G.N.F.C. Narmada Vidyalaya, Bharuch	2022

TECHNICAL SKILLS

Languages | JavaScript, Python, Java, C/C++, HTML5, CSS3
Frameworks | React.js, Node.js, Express.js, Flask, Tailwind CSS
Developer Tools | Git, GitHub, VS Code, Render, AWS (Beginner)
Concepts | REST APIs, Data Structures & Algorithms, System Design, CI/CD
Databases | PostgreSQL (Neon), MongoDB, MySQL, Firebase
AI Integration | Google Gemini API, Pollinations.ai, prompt-based pipelines

WORK EXPERIENCE

Full-Stack Developer (Project-Based, MERN Stack) <i>Independent Developer</i>	2025 – Present <i>Vadodara, India</i>
- Independently designed, built, and deployed production-grade full-stack applications (NewsCore, Daily Drape) using Node.js, Express.js, React, and PostgreSQL/Neon. - Integrated the Google Gemini API for AI-driven summarization and content generation pipelines across multiple projects. - Implemented passwordless OTP authentication and transactional email delivery via Brevo, working around platform-level SMTP restrictions. - Managed end-to-end CI/CD via GitHub-to-Render auto-deploy workflows, maintaining consistent commit history across all repositories.	

PROJECTS

NewsCore <i>Flask, PostgreSQL (Neon), Gemini API, Brevo, APScheduler</i> <i>June 2026</i>	Live Link , Github
- Built a full-stack AI news aggregation platform ingesting RSS feeds via APScheduler and generating dual-format AI summaries using the Gemini API. - Implemented passwordless OTP authentication (via Brevo) with an independently scoped admin dashboard and login analytics. - Deployed on Render with Gunicorn via GitHub-triggered CI/CD; built collaboratively with one project partner over ~1.5 months.	
Daily Drape <i>Flask, PostgreSQL (Neon), Pollinations.ai, Brevo, Chart.js</i> <i>April 2026</i>	Live Link , Github
- Built an AI outfit recommendation app covering 24 combinations across gender, weather, and occasion, with generated outfit imagery. - Migrated persistence from SQLite to PostgreSQL for durability on Render's free tier and switched to Brevo's HTTP API to bypass SMTP port blocking. - Added a Chart.js-powered admin dashboard for login logging, feedback tracking, and usage stats.	
Personal Portfolio <i>React, Vite, Node.js, Brevo</i> <i>May 2026</i>	Live Link , Github
- Designed and deployed a dark-themed developer portfolio with premium case studies for NewsCore and Daily Drape. - Built a working contact form with backend email integration, deployed via GitHub-to-Render auto-deploy.	
Swachh Spot (FUTURE PROJECT) <i>Node.js, Express, React/Vite, PostgreSQL, Leaflet (Planned)</i>	Github
- Planning a civic sanitation discovery platform for citizens to find, rate, and verify public toilets via a Leaflet map. - Designing four-tier role-based access (user, contractor, municipal admin, super admin) with geofenced attendance for contractors.	

CERTIFICATIONS & ACHIEVEMENTS

- AWS Community Day — Amazon Web Services (2026)
- Introduction to Microsoft Azure & Cloud Computing — Parul University VAC (2025)
- Web Development using React.js — Parul University VAC (2025)
- Independently designed, built, and deployed two production-hosted full-stack applications (NewsCore & Daily Drape).
